

EX:NO:33

PROGRAM

```
def quick_sort(arr):  
    if len(arr) <= 1:  
        return arr  
  
    pivot = arr[0]  
    left = [x for x in arr[1:] if x <= pivot]  
    right = [x for x in arr[1:] if x > pivot]  
  
    return quick_sort(left) + [pivot] + quick_sort(right)  
  
arr = [10,16,8,12,15,6,3,9,5]  
sorted_arr = quick_sort(arr)  
  
print("Sorted:", sorted_arr)
```

Output

Sorted: [3, 5, 6, 8, 9, 10, 12, 15, 16]
