

EX:NO:15

PROGRAM:

```
def largeGroupPositions(s):
```

```
    res = []
```

```
    i = 0
```

```
    for j in range(len(s)):
```

```
        if j == len(s) - 1 or s[j] != s[j + 1]:
```

```
            if j - i + 1 >= 3:
```

```
                res.append([i, j])
```

```
            i = j + 1
```

```
    return res
```

```
# Test
```

```
print(largeGroupPositions("abbxxxxzzy")) # Output: [[3, 6]]
```

```
print(largeGroupPositions("abc"))      # Output: []
```

Output

```
[[3, 6]]
```

```
[]
```
