

EX:NO:21

PROGRAM

```
def findKthPositive(arr, k):  
    missing = 1  
    i = 0  
  
    while k > 0:  
        if i < len(arr) and arr[i] == missing:  
            i += 1  
        else:  
            k -= 1  
            if k == 0:  
                return missing  
            missing += 1
```

# Tests

```
print(findKthPositive([2,3,4,7,11], 5)) # 9
```

```
print(findKthPositive([1,2,3,4], 2)) # 6
```

**Output**

9

6
