

EX:NO:24

PROGRAM:

```
def stringMatching(words):  
    res = []  
    for w in words:  
        for other in words:  
            if w != other and w in other:  
                res.append(w)  
                break  
    return res  
  
# Tests  
print(stringMatching(["mass","as","hero","superhero"])) # ['as','hero']  
print(stringMatching(["leetcode","et","code"]))          # ['et','code']  
print(stringMatching(["blue","green","bu"]))              # []
```

Output

```
['as', 'hero']  
['et', 'code']  
[]
```

```
