

EX:NO:10

PROGRAM CODE:

```
def binary_search(arr, key):  
    low = 0  
    high = len(arr) - 1  
    while low <= high:  
        mid = (low + high) // 2  
        if arr[mid] == key:  
            return mid  
        elif arr[mid] < key:  
            low = mid + 1  
        else:  
            high = mid - 1  
    return -1  
  
arr = list(map(int, input("Enter sorted array: ").split()))  
key = int(input("Enter element to search: "))  
result = binary_search(arr, key)  
if result != -1:  
    print("Element found at position:", result + 1)  
else:  
    print("Element not found")
```

Output

```
Enter sorted array: 12 45 26 85 78  
Enter element to search: 26  
Element found at position: 3  
  
=== Code Execution Successful ===
```
